

Project Retrospective

Pros

- It was an interesting project, learned a lot about LLM, teamwork, and refreshed git knowledge.
- Cool and helpful team that worked together well. Was nice to chat with everyone on the tasks during the semester
- The project and Team were perfect, I really enjoyed it.
- Nice project to learn how to create one's specialized LLM
- A lot was learned. Good for CV. Everyone very capable
- Very cooperative and supportive teammates. Learning much new stuff in LLMs
- Very good team, a satisfied product. And thanks to everybody's efforts.
- This project is very good and the other teammates are very good and help each other. We are really happy.

Cons

- Feel like our specific project wasn't really tied well to the whole Amos project. Especially the build and deploy task. But also when we worked on other resources (Hetzner or HPC servers, other than github) and performed tasks like research etc. that are difficult to track for grading.
- Without sufficient resources for LLM training is hard. We would need more money/power to ensure we have sufficient resources and/or FAU also making it possible to access HPC for FU Berlin students

- Maybe the project repos are not the best source to gather dataset
- Hope we can have better resources
